1. Place the inflatable landing airbag on a flat ground. It is best to put a pad (such as a floor mat, plastic color cloth) under the device, and then unfold it.

2. Spread out the product.

3. There is a long air tube connected to the airbag landing that you connect to the air blower. Once connected it is ready to be inflated, turn on the air blower.

4. Pull up the zipper on the air outlet of the airbag landing and then close the zipper and stick to Velcro.

5. Turn on the fan and wait for the product to charge.
